

Spirit of Sovereign

4th May 2006

To Whom It May Concern

We have been using the permagard paint protection system on board the 105' Motor Yacht Spirit of Sovereign for the last two and a half years.

I had the permagard applied to the new paintwork in four specific areas around the yacht, both port & starboard at the stern / transom area and on both sides of the bow upto the first chine. The stern of the yacht is subject to exhaust build up especially on the longer voyages.

On wash down using permagards own product, the multi purpose cleaner, these areas have absolutely no exhaust residue build up remaining on the paintwork. In past after a detergent only wash we might remove 70% of the exhaust build up resulting in a more rigorous buffing / polish to remove all traces.

The bow area is subject to a brown staining close to the water line due to prolonged exposure to wave action and sunlight. Again, there is no trace of this since we applied the permagard coating. As a result these high maintenance areas are no longer! This has led to a large saving in man hours in maintaining the overall hull paintwork.

The permagard crew were professional and careful in there attitude and application of the product. I will certainly continue to use the permagard system on this yacht and ant future yachts I run and would not hesitate to recommend the application of this product. It actually really works!
